

Radiologic Technology Education Programs

Nuclear Medicine

Mission Statement

The Nuclear Medicine Technology Education program at West Virginia University Hospitals is committed to providing students with a solid educational foundation in both the didactic and clinical components in which they will become professionally competent registered nuclear medicine technologists. Through education and development in the utilization of radioactive materials for therapeutic and diagnostic procedures, the students will expand their knowledge of the technical, professional, and philosophical aspects of Nuclear Medicine Technology and the health care environment.

Goals

1. The nuclear medicine student will demonstrate clinical competence in nuclear medicine.
2. The nuclear medicine student will practice effective communication skills.
3. The nuclear medicine student will employ critical thinking / problem solving skills.
4. The nuclear medicine student will exhibit professional behavior.
5. The nuclear medicine student will integrate professional growth and development practices.
