THE TRAUMA RESUSCITATION ROOM

(Where to Find What You Need)

- The Pediatric Trauma room is # 19
- You will notice the Pediatric Cart is up against the wall between beds 1 and 2
- The Broselow Tape is in a hard plastic cover and found hanging from the ceiling between beds 1 and 2
- The cart has the standard layout to reflect the priority in the resuscitation
- Suctioning equipment is on the wall, as is oxygen and peds ambu bags
- There is a papoose board hanging on the wall
- Drawer 1 is BP cuffs of all sizes, including preemie
- Drawer 2 is all Respiratory needs- ETT, airways, suction catheters
- Drawer 3 is the Broselow System pouches in the color-coordinated bags
- Please, when you enter the room, please make yourself known to the scribe and be certain to sign yourself in, if not you will be counted as late arrival
- If you have responded to a P2 page, please indicate on the H&P what time you contacted the Attending
- Should the pediatric trauma be placed in room 21 (typically the adult trauma room), the pediatric cart is on wheels and can be moved if needed.
- In room # 21, the suctioning and oxygen equipment is on the wall. The Broselow Tape is in the same plastic cover as in room 19. This one is hanging on the metal cart between the 2 open doorways
- If you cannot find what you need, please ask
