

Criteria for Pediatric **PRIORITY II Activation Response**
Applies to ALL Trauma from scene or transferred patients age ≤ 16

Priority II Criteria
Trauma Mechanism within 24 hours of presentation
REQUIRED RESPONSE: PARTIAL TRAUMA TEAM ACTIVATION
Chief Resident or Attending presence within 15 minutes

Anatomy

1. Extremity injury with any of the following:
 - A. Pulseless extremity
 - B. GSW or stab wound to extremity
 - C. Amputations proximal to wrist or ankle
 - D. Degloving
 - E. Multiple Proximal Extremity Fractures (Combination of 2 of the following: Femur, Humerus)
2. Crushed Chest/Flail Chest **without** Respiratory Compromise
3. Suspected or confirmed spinal fractures with neurologic deficits/symptoms (ex.: paresthesia, isolated extremity weakness)
4. Pelvic Fractures (**without** hypotension)
5. Combination Trauma with Burns > 10%
6. Open or depressed skull fracture
7. Documented Intra-Cranial Hemorrhage with GCS 9-14

Mechanism

1. MVC with reported history of the following:
 - A. Ejection from Vehicle
 - B. Death in Same Passenger Compartment
 - C. High-Speed Auto Crash – >40 mph
 - D. Seatbelt sign
2. Falls >10 feet
3. Automobile vs pedestrian or cyclist >20 mph
4. Motorcycle/ATV Crash > 20 mph or with Separation of Rider and Vehicle
5. Emergency Physician's Discretion

IF IN DOUBT INITIATE PRIORITY II RESPONSE
