

Radiologic Technology Education Programs

Radiography, Radiation Therapy, Nuclear Medicine, Ultrasound, & MRI

Mission Statement

The Nuclear Medicine Technology Education program at West Virginia University Hospitals is committed to providing students with a solid educational foundation in both the didactic and clinical components in which they will become professionally competent registered nuclear medicine technologists. Through education and development in the utilization of radioactive materials for therapeutic and diagnostic procedures, the students will expand their knowledge of the technical, professional, and philosophical aspects of Nuclear Medicine Technology and the health care environment.

Goals

1. Students will demonstrate clinical competence in Nuclear Medicine.
2. Students will practice effective communication skills.
3. Students will employ critical thinking / problem solving skills.
4. Students will exhibit professional behavior.
5. Students will integrate professional growth and development practices.
