Finding of a pelvic ring fracture
- Call Ortho
- Abx for Open Fx

Unstable
- BP < 90
- HR > 120
- Requiring fluid to maintain BP

- Pelvic binder/or wrap with sheet – if open book pelvis
- Initiate massive transfusion protocol
- Consider REBOA*

Stable
- BP > 90
- HR < 120

Positive Hematuria
- FAST
- CT-IV contrast with delays
- CT-cystogram
- If positive for GU injury
  - Consult Urology
  - Consider intra- abdominal injury

Negative Hematuria
- Fast
- CT abdomen/ pelvis IV with contrast

Positive blush/large hematoma
- IR for angio/embolization
- Consider massive transfusion protocol
- ICU admission

Fast
- Positive
  - Laparotomy
  - Request Jackson bed
  - Room 22
  - ICU Admission

- Negative
  - Ortho-Ex Fix
  - IR for embolization
  - Pre-peritoneal packing

*REBOA: Zone I if FAST (+), Zone III if FAST (-)
